The Planetary Society has offered a $50,000 prize for the best design to   "tag" the Asteroid [Apophis](#) ,   which is due to pass close by earth in [2029](#) .   The aim is to enable the asteroid to be tracked across the sky, which will   allow astronomers to predict a more accurate orbit. The asteroid Apophis is   400m in diameter, and will pass within a few thousand miles of earth. More   accurate information on the asteroid's orbit will enable governments to   decide whether action needs to be taken before its next approach in 2036.

Quote: *""While the odds are very slim that this   particular asteroid will hit Earth in 30 years, they are not zero, and   Apophis and other NEOs represent threats that need to be addressed,"   said Rusty Schweickart, Apollo astronaut, head of the Association for Space   Explorers NEO committee. Bruce Betts, The Planetary Society's Director of   Projects said, "With this competition, we hope not only to generate   creative thinking about tagging Apophis, but also to stimulate greater   awareness of the broader near-Earth object threat."*

The book of Revelation seems to indicate the Mediterranean sea will be   hit by an asteroid strike during the tribulation period, that will destroy a   third part of shipping and sea life. It has been said that even if we knew   exactly when an asteroid was to strike the earth, aside from evacuating   probable impact zones, there is currently little we could do to prevent it.   Several asteroids passed within [close proximity](#)   to the earth a few years ago, one passing between the earth and the moon.   The public was only informed about the near miss a few days after the   event.

Revelation 8:8-9
    And the second angel sounded, and as it were a great mountain burning with   fire was cast into the sea: and the third part of the sea became blood; And   the third part of the creatures which were in the sea, and had life, died;   and the third part of the ships were destroyed.
